

4. Potency of doses (strength)

There are two things I want to mention here. First of all, is the MMS, CDS, CDH, DMSO, MMS2 the correct strength? If not, then you are not going to have the same results. The protocols are based on a certain concentration of strength such as, MMS (sodium chlorite) is 22.4% sodium chlorite solution, MMS2 is 65-75% calcium hypochlorite, DMSO can be found anywhere from 70-100% dilution. The protocols using CDS were developed based on 3,000 ppm, not 6,000, 12,000 etc! We've had people come to us and test the potency of there MMS solution and it was 10-15% which is weak with some samples not even activating! So, make sure you get your products from people we recommend because we've tested them already.

We are NOT saying that all sellers are selling weak products, but we can only recommend those we know are producing their products correctly. So, be careful what you are buying because you want the correct potency. It is your health you are trying to restore and not theirs!

Note: Strong CDS such as 6,000 ppm and up can be explosive! It is not necessary* to have CDS any stronger than 3,000 ppm, so don't buy it with a higher ppm. It will not "restore your health" any faster anyway! The hourly dosing once diluted is around 50 ppm. You can ingest it up to 100 ppm without discomfort, but when you go higher then it irritates the throat and mucus membranes and can be uncomfortable.

(Note: CDS higher than 3000ppm is excellent for *topical applications.)

(Note: if taking strong CDS doses and you experience throat irritation, you could:

- 1- take with more water;
- 2- use the Mouth Holding Method (MHM);
- 3- take smaller doses every quarter hour or half hour totaling the normal hourly dose.)

"If you start out with the wrong potency then you could end up with a different result or no result".

5. Time (how long to take the Protocols)

The standard Protocol dosing time frame is 3 weeks. After the 3 weeks, if your health isn't restored from whatever disease you are trying to eliminate from your body then just keep going until it is!

Especially with diseases such as Herpes, 4th stage cancers, debilitating diseases, diabetes, high blood pressure.

Note: If someone has had a disease for a long time, then it will usually take longer to eradicate it from the body. Keep going until you are successful!

(Note: if Protocol 1000 does not get the desired result, you can move on to P1000+ and/or P2000)

6. Different reception of host

EVERYONE responds differently for a variety of reasons such as:

- a. Parasitical infestations
- b. Liver problems
- c. Lung problems
- d. Toxicity of the body, i.e. the body is full of toxins and needs detoxing. When one is in this condition, you have to go VERY slow.
- e. Compromised immune system

Every body has different issues they are dealing, so the reception of chlorine dioxide in the body differs.

Note: Don't think everyone responds the same and adjust accordingly, i.e. reduce dosing as needed or ramp up if possible. While one person may be able to “ramp up” to as high as 10 drops an hour others struggle with 5 drops an hour. So, adjust accordingly, but DON'T STOP!

7. Multiple complications or diseases

We've had people come to us for “health restoration” with breast cancer, leukemia, diabetes all at the same time. Now, when dealing with multiple diseases one has to religiously take the protocols while “ramping up” and plan on doing the protocols for longer than 3 weeks, more like months to completely restore one's health.

Remember: the longer one has a disease or multiple diseases the longer it takes to eradicate it from the body.

8. Previous Therapies

We have had people come to us, “on their last leg” and have had multiple chemotherapy treatments, radiation and surgeries which makes it hard to “restore health” due to weakened immune system, removed spleen and/or lymphatic system as well as the circulatory system cut and cauterized to hinder blood flow.

When a person is trying to “restore health” and has these situations to deal with he or she has to understand it might take much longer to detox the body from pathogens and “restore health”.

9. Diet

To build the immune system, one has to give the body essential vitamins, minerals and nutrients. The body assimilates these best in their natural state. Organic foods, no GMO's, no hormones, no preservatives or processed foods.

We recommend to build the immune system with foods such as:

- a. Raw milk
- b. Raw butter
- c. Raw cheese
- d. Fresh organic beef liver, chicken liver and red meat with the fat, esp. red meat.
- e. Raw honey
- f. Moringa leaf (high in antioxidants) Only to be used after daily protocols.
- g. Fresh organic fruits and vegetables. Juicing raw is great!

Note: If one is doing the protocols and follows an unhealthy diet then the results could be effected.

10. Parasitical infestations

We have started having people do a parasite cleanse and have seen better and faster results when the parasites are eliminated from the body. Everyone in this world has parasites they deal with in

their lifetime, but if the body's immune system is strong, then they are kept in check. But, when one's body is infested with parasites it has to be dealt with to “restore health” completely.

Note: Everyone should do a parasite cleanse once or twice a year to keep the body cleansed, especially those working in areas where parasites live and breed, i.e. working with animals, sewage and other such areas.

11. Stress on immune system (weak or non-existing)

Stress is a “killer” to the immune system if the body. Work, home, finances, relationships and just plain living in this world can cause a lot of stress if you let it. With a weakened immune system the body doesn't have it's internal pathogen killing ability to help “restore health”.

Note: Try to live a stress-free life as much as possible while trying to overcome any health issues.

12. Attitude (You need a gratitude attitude!)

Having a positive attitude when trying to heal the body is essential. Be grateful for life itself and the pleasures it brings.

Note: Try to keep negative people and situations away from one's self when trying to “restore health”.

13. Blood testing (false positives and outright errors, i.e completely untrue)

a. Herpes

We have had people have a positive test for HPV and never have a breakout and have had people test negative and have had breakouts. Are these tests reliable? We spend more time asking people we are “restoring health” to, “how do you feel?” We want them to tell us the differences in their bodies if any and watch to see if they are gaining weight, sores healing, skin rashes and irritations gone and general sense of well being, being restored. Those things are positive indications of health being restored even if the tests don't agree.

Note: Many times it is months before people get the results they want and maybe never, but “How do they feel?”

b. Autoimmune deficiency

The test for HIV is a test looking for evidence of the presence of 47 auto-immune deficiencies. It has been proven that many pregnant women test positive for HIV when in reality they are later tested as negative. People that have had tetanus shots have also tested positive for HIV when later testing is negative. This has also been known to occur for people that have had a yellow fever vaccine.

Note: Watch out for believing the HIV test!

14. Surgical destruction

It is difficult for the body to eliminate toxins from the body when the body's system that is in control of elimination such as these mentioned below, are eliminated or damaged. Here are some key components of the body's immune system:

- a. Cutting out immune system (Lymph-nodes)
- c. Colon removed
- d. Kidneys removed
- e. Lung removed partially or completely
- f. Brain surgery (removal of brain matter and veins cut and cauterized)
- g. Spleen removed

Infections such as MRSA – Staph infections, are common results of surgeries worldwide and the presence of this bacteria in the body hinders the restoration of health until it is eliminated.

15. Vaccine residues

Vaccines have been proven to cause many diseases such as Autism, paralysis (partial or complete), strokes, and neurological disorders to name a few.

- a. Heavy metals – Mercury, aluminum and others
- b. Toxins – Formaldehyde, alcohol
- c. Diseases – The creator of the polio vaccine admitted that up to 50 diseases such as cancers and diabetes were added to the vaccine for polio.

Note: If someone has had multiple vaccines the restoration of health can be more difficult.

16. Non-biological agents

High amounts of Asbestos in the body can hinder health restoration, esp. in the lungs.

Morgellons disease is a disease that puzzles many because there are worm-like strains coming out through the skin and eyes and when examined under a microscope names of pharmaceutical companies are seen! This is not a natural occurring disease.

Note: There may be many more non-biological pathogens in the world that we have to consider when trying to “restore health”.

17. Family pressure

Family and friends can really discourage one from taking the protocols correctly by being negative about what is being taken as well as doubting it will even work. Husbands not supporting wives and vice versa should not discourage one from continuing and therefore not achieving restoration of health.

Note: The support from family and friends when trying to restore one's health is very important and the lack thereof can reduce the results of the protocols.

18. Psychosomatic factors

Psychosomatic disorders are real to the person that has them, but they don't really exist; the person believes he or she has a disease that really doesn't exist!

Psychosomatic illnesses exist and need to be considered when trying to “restore health”.
