

the dosing is CONSISTENTLY being taken every hour for 8-10 hours a day. That CONTINUED hourly bombardment of MMS or Chlorine Dioxide in the body against the pathogens can increase the results tremendously! The person has to be consistent and dedicated to their hourly dosing. We know that it isn't convenient when working or traveling, but with the development of Protocol 1000 in a daily bottle, it is much easier. You can now prepare your whole day's dosing in a 1 liter or 1 quart bottle and carry it with you the whole day. So, now it is a lot easier and more practical.

Note: You have to remember to keep it out of the sun so not to neutralize its strength. A good idea is to set your cell phone's alarm to go off every hour as a reminder.

So, DO YOUR PROTOCOLS CONSISTENTLY IF YOU WANT GOOD RESULTS!

2. Dosing

The basic MMS1 protocol is 3 drops an hour for 8 hours. It is called Protocol 1000 and can be used with MMS1, CDS or CDH. (*Note: see dosing chart on last page*) Although this protocol done for 3 weeks "restores health" to most health issues, many times we have to "ramp up" the doses to have better and quicker results. This is especially true with Herpes, Diabetes, HIV and 4th stage cancers. "Ramping up" is adding 1-2 additional drops an hour as soon as the body tolerates MMS well. Staying at the "standard" 3 drops an hour can take longer than 3 weeks, so Protocol 1000 for 3 weeks might not "restore health". "Ramp up"! (*Note: taking more than 3 drops of MMS1 per hour does not conform to P1000, but is suggested here if desired results are not obtained*)

3. Neutralization

Another reason why people aren't having success is they are neutralizing the doses. During the daily protocol, you have to eliminate things that will neutralize or weaken the solution such as: Vitamin-C, coffee, alcohol, chocolate and anti-oxidants; too many things at once and recreational drugs.

Note: If you are adding DMSO to your protocol, i.e. Protocol 1000+, you have to add the DMSO separately each hour by pouring out your hourly dose into a glass, add DMSO, wait 3 minutes, then drink.

Example: We had one guy come to us that had been taking MMS1 for 2 years without good results. I asked him what else he was ingesting during the day and he said, only 3,000 milligrams of Vitamin-C. Well, no wonder he didn't have good results, he was neutralizing the doses.

Note: If you want to drink coffee or tea, do it for breakfast then wait an hour before you start your daily dosing. We have people taking Moringa 1-2 hours after the daily protocol because it contains 47 antioxidants and by the time they start the next day's protocols, it is out of the body.

Important: Learn how to use Chlorine Dioxide high range test strips and test all liquids used to see if chlorine dioxide is being weakened or completely eliminated. It is crucial to keep chlorine dioxide working at its optimum potential consistently. It is best taken with distilled water, especially with the taste factor almost eliminated with CDS & CDH, or the activation of MMS with 4% HCL (hydrochloric acid). HCL is produced by the body and is used in the stomach.

Every body has different issues they are dealing, so the reception of chlorine dioxide in the body differs.

Note: Don't think everyone responds the same and adjust accordingly, i.e. reduce dosing as needed or ramp up if possible. While one person may be able to “ramp up” to as high as 10 drops an hour others struggle with 5 drops an hour. So, adjust accordingly, but DON'T STOP!

7. Multiple complications or diseases

We've had people come to us for “health restoration” with breast cancer, leukemia, diabetes all at the same time. Now, when dealing with multiple diseases one has to religiously take the protocols while “ramping up” and plan on doing the protocols for longer than 3 weeks, more like months to completely restore one's health.

Remember: the longer one has a disease or multiple diseases the longer it takes to eradicate it from the body.

8. Previous Therapies

We have had people come to us, “on their last leg” and have had multiple chemotherapy treatments, radiation and surgeries which makes it hard to “restore health” due to weakened immune system, removed spleen and/or lymphatic system as well as the circulatory system cut and cauterized to hinder blood flow.

When a person is trying to “restore health” and has these situations to deal with he or she has to understand it might take much longer to detox the body from pathogens and “restore health”.

9. Diet

To build the immune system, one has to give the body essential vitamins, minerals and nutrients. The body assimilates these best in their natural state. Organic foods, no GMO's, no hormones, no preservatives or processed foods.

We recommend to build the immune system with foods such as:

- a. Raw milk
- b. Raw butter
- c. Raw cheese
- d. Fresh organic beef liver, chicken liver and red meat with the fat, esp. red meat.
- e. Raw honey
- f. Moringa leaf (high in antioxidants) Only to be used after daily protocols.
- g. Fresh organic fruits and vegetables. Juicing raw is great!

Note: If one is doing the protocols and follows an unhealthy diet then the results could be effected.

10. Parasitical infestations

We have started having people do a parasite cleanse and have seen better and faster results when the parasites are eliminated from the body. Everyone in this world has parasites they deal with in
